

KAIDI is committed to providing exceptional support and innovation. Your customers can look forward to an even more dynamic, responsive, and user-friendly experience with this latest update to KAIDI Control Boxes.

Traditionally, KAIDI Control Boxes incorporated a power-saving feature that would induce a "sleep" state during periods of inactivity. While this was a commendable approach to conserve energy, user feedback has advocated for improved response time. Moving forward, **Control Boxes KDDY094 and KDDY099 will have "constant power" reducing the response time by 50%.** This change ensures that the height-adjustable desk is perpetually prepared to respond promptly to any input commands.

Response time: <1 sec; **~50% improvement.**

Standby Power Consumption: **2.6W.**

Improved performance.

Please ensure that your records are up-to-date with the most current spec sheets for the above part numbers.

KAIDI remains steadfast in our mission to empower users with the tools they need to create healthier and more productive work environments.
